

RISO Connector for PaperCut MF (Multifunction)

Enhanced usability and print release

Now RISO customers can control user access to their ComColor device, provide secure print release, track copy activity and report on all user and device activity as a part of a total PaperCut solution.

New Firmware to integrate PaperCut

RISO Kagaku Corporation, Tokyo, Japan (an approved Integrated Technology partner for PaperCut Software) has developed firmware for the ComColor series of high-speed devices which integrates with PaperCut MF.

The firmware enables access control, copy tracking and print job release via the ComColor touchscreen.

Easy to use and deploy

A simple RISO recipe script enabled within the PaperCut admin console can redirect large print jobs to a RISO ComColor device. The user receives a screen pop-up notification that their job has been re-directed.

In addition, the RISO firmware solution provides:

- Secure access to the device
- Find Me printing and secure print release
- Copy tracking with department and project allocation at the ComColor device

Availability

PaperCut MF integrates with this RISO firmware via a RISO connector license, available from PaperCut or RISO suppliers.

To integrate with PaperCut MF, ensure the latest ComColor device firmware is being used. If the device has older firmware, contact a RISO supplier for a firmware update.

For assistance in finding a supplier, please contact one of the PaperCut Authorized Solution Centers (ASCs) who distribute PaperCut in your region.

Support

The RISO ComColor device firmware is developed, supplied and supported by RISO. Support for the total solution will be provided by your PaperCut supplier.
